Care You Can See™ states our vision to support radiologists in their goal of providing quality care that is visible within their discipline and to others across the healthcare community.
Enterprise Imaging

Agfa HealthCare’s Enterprise Imaging takes an innovative approach to solving provider challenges within image management -- from acquisition and diagnostics through distribution. The scalable, incrementally deployable platform meets your individualized requirements for interoperability while reducing cost, complexity, and the need for multiple integrations. Enterprise Imaging is designed to deliver workflow efficiencies and clinical collaboration, reflecting our commitment to strengthening radiology’s role in patient care.

- Radiologist-curated capabilities such as accurate protocoling, advanced image processing, re-defined hanging protocols, and rich native teaching files are a few of the innovative productivity features designed for consistent and efficient study management.
- Collaborative features to help improve communication and handoff between each of the users involved in the diagnostic imaging process.
- Customer-driven enhancements include academic, multi-site, and additional specialty workflows for medical imaging, which help facilitate increased collaboration across specialties, and sites.
- Multispecialty imaging is extended into ophthalmology and dental imaging workflows. Video Management, powered by Orpheus, enables remote viewing of live cases in the operating room and real-time audio and video consultation.
- Further innovations include advanced workflow capabilities and enhanced intelligent rules, embedded in the VNA service.
- Business intelligence reports help boost efficiency in the value-based care enterprise, with reports and tools that provide historic, current and predictive views of operations.
- With the Engage Suite for coordinated care, hospitals can offer care providers, referring physicians and patients “anywhere, anytime” access to the patient’s health information from different sources.

In this era of value-based care, clinical efficiency is paramount, and Agfa HealthCare’s Enterprise Imaging platform provides the tools, integration, and intelligence to get you there.

Care You Can See™
Attend the Symposium

Advancing the Emerging Role of Radiologist as Enterprise Imaging Leader: Expertise, Collaboration and Patient Safety

• TUESDAY 3:00-4:30 PM
• LEVEL 1, ROOM S101AB

REGISTER for the SYMPOSIUM
**MUSICA® goes DYNAMIC**

Award-winning DR solutions are designed to deliver workflow efficiencies and clinical collaboration reflecting our commitment to radiologists and their patients.

In 2016, Agfa HealthCare received Frost & Sullivan’s North American Product Leadership Award for Digital Radiography, highlighting the strong performance of its DR portfolio with industry-leading image quality.

With each decade, Agfa HealthCare’s MUSICA image processing software has been taking digital X-ray to the next level.

Integrated with all of Agfa’s DR and CR solutions, MUSICA brings intelligent image processing to a new level by showing exquisite detail in low noise images that allow technologists to capture high-quality images at a lower dose.

For the first time at RSNA 2016, Agfa HealthCare will demonstrate the power of MUSICA image processing on dynamic imaging*.

**DX-D 100+ Mobile DR with FreeView™ Technology**

The highly maneuverable, wireless DX-D 100+ mobile DR features FreeView Technology for better maneuverability and ease of use by offering a telescoping column for an unobstructed view while driving and positioning the unit.

**DR 600 Top-performance X-ray room with ZeroForce™ Technology**

DR 600 offers a winning combination of speed, precision and comfort. It streamlines workflow, increases throughput and enhances the experience of patients and operators alike, even in the busiest imaging environment. Full Leg Full Spine (FLFS) is made easy with EasyStitch™ Technology, automatically minimizing distortions for high precision imaging.

**Fast Forward to DR program** helps providers upgrade their imaging equipment at an affordable cost, often with no capital expense. Healthcare organizations can DR Retrofit their existing X-ray investments, resulting in higher quality images, potential for lower radiation dosages, increased productivity, and a more efficient workflow.

In 2016, Agfa HealthCare was recognized by Frost & Sullivan with their North American Product Leadership Award for Digital Radiography, highlighting the strong comprehensive performance of our DR portfolio.
